

AUTOMATED CONTENT INTEGRITY REPORT

Similarity Audit Report

Multi-Pass Exact, Near-Match, Paraphrase, & Web Grounding Verification

AUDIT SPECIFICATIONS & METADATA

Document Name:	Academic_Research_Paper_Transformers.pdf
Report Identification:	PLA-SCAN-TEST-EN
Audit Execution Date:	September 10, 2026
Document Word Count:	3,450 words
Character Count:	93 characters
Analysis Engine Version:	Plagora AI Multi-Pass Engine v2.0 (Gemini Powered)

This document contains confidential automated analysis generated by Plagora AI. Results represent similarity indicators.

1. EXECUTIVE SUMMARY

24%

OVERALL SIMILARITY SCORE

Classification: MODERATE SIMILARITY • AI Confidence: HIGH

8%

Exact Match

7%

Paraphrased

5%

Semantic

12%

Web Verified

ANALYSIS NARRATIVE & INTERPRETATION

Moderate similarity was identified across specific sections. Several passages contain matching terminology or structural paraphrasing that warrant human editorial review.

DOCUMENT INFORMATION SUMMARY

Document File Name	Academic_Research_Paper_Transformers.pdf
Total Word Count	3,450 words
Total Character Count	93 chars
Total Matches Flagged	1 candidate matches
Verified Web Sources	1 external sources
Audit Status	Completed

2. SIMILARITY BREAKDOWN & CONTENT DISTRIBUTION

DETAILED DETECTION CATEGORY BREAKDOWN

SCORING INTEGRITY & INTERVAL DEDUPLICATION

Plagora AI uses interval deduplication to resolve overlapping candidate matches. Character ranges flagged across multiple detection passes are merged to ensure overall similarity score reflects exact union metrics without double counting.

3. DETAILED MATCH EVIDENCE & EXPLANATION

MATCH #1 — EXACT MATCH		88% SIMILARITY
YOUR DOCUMENT PASSAGE "Natural language processing has witnessed unprecedented growth over the last decade driven by transformer models."	VERIFIED REFERENCE MATCH "Natural language processing has witnessed unprecedented growth over the last decade driven by deep learning."	

AI Explanation: Verbatim phrase match against published computer science literature.

4. VERIFIED WEB SOURCE VERIFICATION

Source #1 — NeurIPS Proceedings: Attention & Transformer Mechanics**88% Match**

Domain: neurips.cc • Type: WEB • Verified: YES

URL: <https://proceedings.neurips.cc/paper/2017/file/attention>

5. METHODOLOGY & LEGAL DISCLAIMER

PLAGORA AI MULTI-PASS ANALYSIS METHODOLOGY

Plagora AI evaluates text through a multi-pass pipeline combining deterministic character hashing, Levenshtein edit distance near-matching, Google Gemini AI paraphrase classification, vector semantic similarity analysis, and live web search grounding. Overlapping intervals are deduplicated to produce an accurate union similarity score.

MANDATORY AUDIT DISCLAIMER

- *Similarity results are automated indicators and should be reviewed by a human. A similarity match does not by itself establish plagiarism.*
- *Absence of a verified web match does not prove that content is original.*
- *Analysis depends on public web indexing and model evaluation parameters.*
